TOKEN8

# WHITEPAPER

01

## EXECUTIVE SUMMARY

Token8 is an end-to-end, compliance-first infrastructure for tokenising real-world assets (RWA) – starting with institutional-grade real-estate in Latin America. Our protocol converts property equity into fungible on-chain tokens, opening 24 / 7 liquidity for asset owners while granting global investors fractional access from as little as USD 500

02

## MISSION & VISION

"The next generation for markets is tokenization." — Larry Fink, CEO, BlackRock

### MISSION

Our mission is to build the compliant infrastructure that empowers asset owners and promoters to raise capital through tokenized ownership, giving real-world investors direct access to global, liquid, and transparent markets.

### VISION

We aim to decentralize the gateway to capital formation by offering compliant infrastructure for asset owners and promoters to unlock liquidity via tokenized ownership models.

03

## PROBLEM STATEMENT

Traditional asset financing and investment processes suffer from:

- Slow and opaque transactions
- High entry barriers for small investors - large ticket sizes
- Complex regulatory burdens - cross border friction
- Centralized gatekeeping by legacy intermediaries
- Illiquid markets for traditionally non-fungible assets (real estate, etc.)

04

## THE TOKEN8 SOLUTION

Tokenization of physical or legal rights over assets

- Orchestration and Distribution of tokenized offerings
- Investor onboarding with integrated KYC flows
- Secondary market infrastructure for p2p resale
- Democratized Access: Opens institutional-grade real estate to anyone, anywhere—with ticket sizes as low as USD 500 via stablecoins or credit card.
- Instant Liquidity: Transforms illiquid property equity into tradable tokens on a 24/7 secondary market.
- Compliance-First: Built-in KYC/KYB, jurisdictional rulesets, and on-chain audit trails eliminate legal friction for issuers and investors alike.
- Seamless End-to-End: From asset digitalization (GENESIS) through primary issuance and sale (NEO), to compliant trading (NOVA), Token8 handles the entire workflow under one roof.

### CORE MODULES

- **GENESIS (Step 1):** Digitalization & Token Generation Includes asset due diligence, token creation, admin portal access, and platform setup.
- **NEO (Step 2):** Offer and Distribution Engine Smart contract orchestration for primary token sales, whitelist rules, and investor funneling.
- **NOVA (Step 3):** Marketplace Layer Resale and liquidity module to enable aftermarket trading under compliant frameworks.

05

## USER JOURNEY & STAKEHOLDERS

1. **Asset Owner / Issuer** uploads property docs, passes KYB and lastly, launches sale in NEO.
2. **The investor** completes KYC, connects the wallet (Phantom, TipLink) and buys tokens.
3. **Promoter & Protocol** drives distribution and raise of funds; automates settlement, yield airdrops, and compliance reporting.

06

## BENEFITS

### FOR ASSET OWNERS AND ISSUERS

- Increased exposure and global investor access
- Compliant fundraising infrastructure
- Efficient distribution costs vs. traditional methods

### FOR INVESTORS

- Passive yield opportunities
- 24/7 liquidity via secondary markets
- Low minimum ticket ($500 USD)
- Fractional access to high-value assets

07

## CASE STUDY

TOKENIZED BEACH HOUSE IN [ REDACTED ]

- **Capital Raised:** USD 350 K (4 % commission).
- **Tokens Issued:** 1 M @ USD ~0.35.
- **Investors:** 700 tickets (500 USD min | ~1,428 tokens per ticket).
- **Outcome:** property fully funded in X days; rental yield distributed on-chain.

08

## BUSINESS MODEL & MONETIZATION

**Token8 monetizes via:**

- **Setup and digitalization:** One-off cost covers due diligence & token minting
- **Raise fee:** 4% of the total capital raised.
- **Secondary trading fee:** peer 2 peer marketplace/order books
- **Airdrop/Claim & Distribution:** Funds distribution of yields or dividends.

09

## TECHNOLOGY ARCHITECTURE

- **Smart Contract + Scalable Backend:** Custom orchestration layer of servers and Solana program combined for token sales and rules allowing fast deployment per project; isolation and modularity so security is better enforced.
- **Admin Dashboard:** Token issuance, investor management, funds distribution/management and analytics
- **Marketplace Integration:** Token resale engine (order book) with compliance gates
- **Compliance Stack:** KYC with providers like Sumsub and ShuftiPro. In-house legal team to complete due diligence + KYB per property.

10

## ROADMAP & MILESTONES

QUARTER MILESTONE STATUS

| PHASE | TIMELINE | FOCUS | KEY ACTIONS / MILESTONES |
|---|---|---|---|
| **0 – MVP** | Q3 2025 | Pilot Launch | Launch in Guatemala with 2 beachfront properties |
| **1 – ROLLOUT** | Q3 2025 | Early Growth | • Integrate referral program<br>• Open whitelist for next property drops |
| **2 – GROWTH** | Q1 2026 | Feature Expansion | • Enable direct credit-card payments<br>• Release public SDK & API |
| **3 – SCALE** | Q3 2026 | Market Expansion | Expand TOKEN8 beyond Guatemala to offer more, diverse investment opportunities |

11

## REGULATORY STRATEGY

Token8 is designed with a compliance-first approach:

- Modular jurisdictional configurations (e.g. exclude local buyers if needed)
- Integrated KYB/KYC
- Legally audited templates and contracts
- Asset segregation and transparency reporting

12

## RISK & MITIGATION

Regulatory Changes: maintain multi-jurisdictional legal counsel.

- **Smart-Contract Risk:** rigorous audits, bug-bounty, fail-safe pausable modules.
- **Market Liquidity:** LP incentives + market-maker partnerships.
- **Custody:** user self-custody via wallets; protocol never touches investor funds.
